Spam Marshall SpamWall

Spam Marshall is a complete Security solution for Corporate E-mail Servers. Spam Marshall reduces administrative cost while increasing employee productivity in business environment where E-mail is a critical tool for doing

State of the art anti-spam and anti-virus technology used in Spam Marshall is suitable for any size of business that hosts its own e-mail servers. Spam Marshall works with any SMTP mail server such as Microsoft Exchange on Windows, Sendmail on Linux or Solaris, or Postfix on Mac OS X Servers. Spam Marshall is available as a downloadable software that can be installed easily on your existing mail server in minutes or as a stand-alone plug-n-play appliance. With its easy to deploy setup routine and intuitive management interface, Spam Marshall is preferred by E-mail administrators throughout the world. Our quality of customer and technical support is one more reason for choosing Spam Marshall as your choice for e-mail

Customer Quote:

"Spam Marshall's anti-spam and anti-virus CuRE technology and SMTP Intrusion Detection System (IDS) certainly live up to their claim." I would strongly recommend this product to anyone."

William "Chip" Griggs
Vocall Communication Corp.

- Single click e-mail message restoration feature
- Auto notify sender of blocked e-mails
- Users can view and restore their own Spam messages
- Stop dangerous attachments easily

Spam Marshall Enterprise Edition

The Enterprise Edition of Spam Marshall is designed for ISPs and large enterprises requiring handling of large volumes of e-mails per day, high scalability and zero downtime. Spam Marshall Enterprise edition can handle millions of e-mails per day with unlimited scalability and zero downtime.

Spam Marshall Enterprise Edition includes all the features provided in Spam Marshall SpamWall Corporate Edition / MS Exchange, plus:

Clustering

Spam Marshall clustering allows multiple machines to be used as one. Every machine in the cluster can accept emails (inbound and outbound). Administrators and users only connect to one machine to modify rules and view quarantined messages. Clustering provides:

- ☞ Scalability
- ☞ High availability
- ☞ Zero down-time
- ☞ Centralized management

Multiple profiles

Profiles in Spam Marshall define a set of rules used by the Rules Engine to determine the type of message received by the e-mail server. By having multiple profiles you can apply different rules for multiple e-mail domains. For example the Accounting department can have a different set of rules than the Sales department or an ISP can provide custom set of rules by e-mail domain hosted for a client.

Multiple Administrators

You can define multiple administrator with each responsible for managing a separate profile independent of others.
